COVID-19 analysis report

In an atypical year of healthcare like 2020, near-real-time data and research is essential for planning and generating useful benchmarking comparisons.

Leveraging our Emerging Experience data set, MedInsight's COVID-19 Analysis Report enables organizations to pinpoint gaps in care, recognize disparities, and discern opportunities to improve healthcare management.

To gain early insights into healthcare trends, MedInsight, Milliman's healthcare analytics practice, maintains a research data set based on a national subset of commercial self-insured plans, administrative services organizations, Medicare Advantage plans, and managed Medicaid plans, which contribute claims data to the Milliman Health Research Database. This de-identified, aggregate data set contains approximately 12 million lives spread across commercial, Medicare and Medicaid members and enrollees, and is the source database for MedInsight's ability to generate highly useful analyses.

Your claims experience can be compared to the metrics and trends generated from MedInsight's reference data set. This can help your organization anticipate and prepare for shifts in healthcare utilization. Advanced analyses on this data set can be customized to help you explore opportunities to improve healthcare quality and cost.

WE OFFER THREE TIERS OF SERVICE:

Basic: One-time purchase of the most current month's COVID-19 analysis report. This provides summaries of healthcare trends across the nation, with nuanced variables that may help identify gaps, disparities and opportunities. Your organization will receive a set of slides including chart visualizations of basic queries, as well as tables of summary data.

Comparison/Custom: We run the specific coded analyses on your organization's data for directly comparable results to analyses from our normative data set. Examples of custom queries may include:

- The impact of COVID-19 on healthcare utilization, cost, and quality
- Patterns of testing or admissions
- Where virtual care is most utilized/most effective
- Impact on maternity care or mental health care
- Changes in behavioral health, preventive services, or chronic disease management
- Racial disparities studies
- Quality of care analyses

Subscription: Your organization will receive our COVID-19 Analysis report each month, as our reference data set will be refreshed monthly.
