

Milliman **MedInsight** VBC Contracts

Financial visibility across every value-based agreement, all year long

Understand how every contract is performing throughout the year, well before year-end settlement

Value-based agreements represent a growing share of revenue for payers and providers alike, and managing them well depends on timely insight into how each contract is tracking through the year. The MedInsight® Value-Based Care (VBC) Contracts application gives payers, accountable care organizations (ACOs), health systems, and independent physician associations a single, current view of financial performance across their entire portfolio, applying Milliman's actuarial methodologies to forecast settlements, model cost scenarios, and monitor results at the provider and population level.

What VBC Contracts delivers

Comprehensive financial projections

Calculate and compare settlement performance across past, present, and future years, spanning fee-for-service and risk arrangements including MSSP, LEAD, and custom payer-provider contracts.

Interactive modeling

Model cost-reduction scenarios across commercial, Medicare Advantage, Medicare FFS, and Medicaid risk contracts, and export results to Excel for further analysis.

Standardized reporting

Process each arrangement's data feed as delivered and produce consistent reporting across every agreement, drawing on MedInsight's industry-leading data processing.

Contract Builder

Configure a proposed contract's risk-sharing terms, benchmarks, and attribution, then project its performance for the coming year without needing actuarial support for every scenario.

Detail at the risk-unit level

Monitor performance at the NPI, TIN, or clinic level to see which groups are driving performance and distribute savings and losses equitably among participating providers.

Settlement calculation and audit

Produce settlements aligned with actual contract terms and provide documented evidence when your figures differ between sources.

Business value

Improve contract and cost management

- See every value-based agreement in one centralized view
- Compare performance at the provider group, region, TIN, or NPI level
- Forecast savings and losses with Milliman's actuarial methodology

Optimize operational efficiency

- Work from one source of truth that aligns payer and provider data
- Standardize reporting across agreements and reduce in-house development
- Analyze years of history for trends and export to Excel

Increase performance and profitability

- Estimate value-based payments within months of the year's start
- Model scenarios to weigh potential savings or losses before you commit
- Target interventions with provider-level detail

Use cases across payer, provider, and consultant teams

Financial performance & settlement forecasting

Payer Provider

Big-picture view for current-year projections across all your arrangements.

Contract modeling & design

Payer Provider Consultant

Configure terms and project performance before signing, with Contract Builder.

Advanced contract management

Payer Provider

Evaluate performance across alternative payment models by comparing payments to actual costs.

Scenario development & analysis

Payer Provider Consultant

Build and share detailed what-if scenarios within the application or export them to Excel for further modeling.

Standardized reporting & transparency

Payer Consultant

Consistent, high-quality, and timely reporting to partners without an in-house build.

Year-end financial reconciliation

Payer Provider Consultant

Determine settlement values accurately and reduce reconciliation errors.
