

For value-based care success, accurate risk adjustment is essential for fair reimbursement and optimal patient care. However, healthcare organizations may encounter significant challenges in maintaining this balance without the right data and insights. Issues arising from inaccurate risk scoring, inefficient HCC documentation and coding, and undocumented or untreated conditions can result in both significant financial losses and suboptimal patient outcomes. In addition, addressing these gaps can place a heavy burden on both payers and providers, involving costly, time-consuming processes.

The Milliman MedInsight® Risk Adjustment Platform offers organizations a comprehensive end-to-end solution that combines industry expertise, proven technology, and accurate data to improve care, reduce costs, and manage financial risks. With the Risk Adjustment Platform, organizations can confidently track their performance and meet the needs of MSSP, ACO REACH, Medicare Advantage (MA), Medicaid, commercial groups, and ACA. Our expert data (VRDC) and risk adjustment skills help maximize your project's ROI, whether you use our patient-centric or provider-centric model. Our data also gives you valuable insights into market expansion, finding provider partners, and seeing which MA products members choose in different areas.

Our platform is designed for easy turn-key implementation or flexible use with client teams. We offer clinical coders, nurses, and doctors to help you make a quick market impact. We can either support your staff with Clinical Documentation Improvement or do it all on your behalf including the following capabilities:

### Unified health records

Access all major national data networks and integrate direct APIs to build the most comprehensive medical records and ensure no critical information is missing.

### Claims medical record integration

Bridge the gap between claim data and medical records to track responses and assess sufficiency of documentation, streamlining workflow and enhancing accuracy.

### Customizable insights

Tailor reporting and filter to specific members, populations, or categories to gain granular insights and drive informed decision-making.

### Enhanced coding compliance

Efficiently monitor coding compliance and HCC risk, with provider-specific insights to differentiate between isolated errors and providers needing further training.

### Seamless system integration

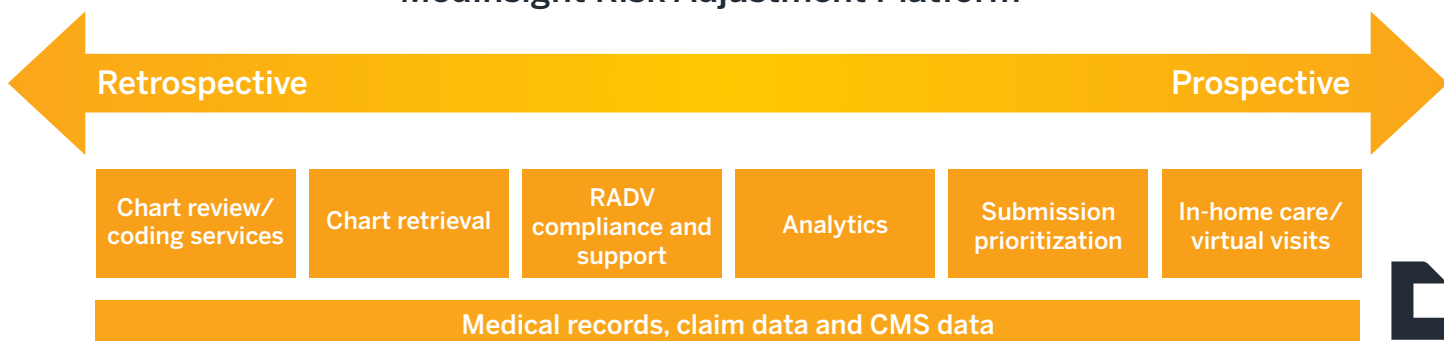

Effortlessly integrate structured medical record data with existing systems and workflows to enable stored queries and reports for easy future access.

### Proactive care identification

Quickly pinpoint members requiring additional care, including in-home care or virtual visits, to improve plan Star Ratings and health outcomes.

## MedInsight Risk Adjustment Platform

## Ensure accuracy and compliance

Maximize your data's potential with our integrated risk adjustment solution. Our advanced retrospective and prospective processes offer a more accurate and complete view of your population's health status, speeding up chart reviews, identifying conditions for recapture, and closing care gaps.

## Enhance clinical documentation, coding and care

Ensure accurate records and identify opportunities to engage providers. Our approach corrects past coding errors for proper reimbursement and uses real-time data to identify high-risk members early, enabling timely interventions to prevent issues and reduce healthcare costs.

## Streamline risk adjustment and quality processes

Drive successful risk adjustment initiatives and improve quality measurement. We seamlessly retrieve, scan, and process medical records from various sources into electronic medical record (EMR) systems, ensuring you have accurate and timely data at your fingertips to maximize the impact of each visit and intervention.

## Use cases: How the Risk Adjustment Platform can help

### HEDIS gap closure

Detect performance gaps, track progress, and implement targeted interventions, ensuring that your healthcare quality measures are consistently met and improved.

### Care management

Identify and prioritize high-risk patients who could benefit from targeted follow-up initiatives to improve patient outcomes and deliver more focused care.

### Fraud, waste and abuse

Track and analyze trends, pinpoint areas of concern, and take proactive measures to address potential issues and ensure that resources are used efficiently.

### RADV audits

Get ready for RADV audits in both ACA and MA markets. With our easy-to-use diagnostic validation, you can quickly verify your data for accuracy and compliance.

## Get Started Today

Find out how your organization can optimize performance with trusted data, integrate with powerful insights, and uncover hidden opportunities. To learn more, contact us at [info@medinsight.com](mailto:info@medinsight.com).
