

Milliman MedInsight Bundles

Support bundled payment contracts with accurate data and benchmarks

Healthcare reform demands that organizations prepare for the transition from a fee-for-service (FFS) payment model to value-based reimbursement models. While bundled payment models require providers to take on risk for the services provided within defined episodes of care, they also present opportunities to incentivize care coordination, cost reduction, and quality improvement. To effectively implement bundled payments, organizations must have actionable data to find opportunities, set goals, and manage budgets.

The MedInsight® Bundles application offers organizations participating in bundled payment programs the insights they need to efficiently manage the payment models implemented by the Center for Medicare and Medicaid Innovation (CMMI). These models include the Enhancing Oncology Model (EOM) and the Transforming Episode Accountability Model (TEAM). With the Bundles, organizations can take advantage of the following capabilities to better meet their quality and financial objectives:

Maximized financial performance

Stay informed of shifting reimbursement trends and proactively strive to position your organization to remain at the forefront of financial and revenue-generating initiatives.

Deep data and market expertise

Collaborate with a recognized industry leader that has worked with numerous parties to develop episode and payment methodologies and offers complete transparency into the process, including customization.

Dynamic claims interface

Maintain flexibility to address any unintended impact, especially those bundled payments with broad episode definitions, with self-guided data visualization and analytics.

Accelerated efficiencies and insights

Manage episodes of care with more context and confidence, analyze utilization patterns over time, and drill into the detail of individual patients to drive improvements.

Increased alignment and adoption

Promote greater transparency and collaboration with reliable data and insights (e.g., such as variation, overall episode costs, and related expenditures) to align incentives.

Glide path for future models

Accelerate VBC initiatives and future alternative payment models with a rigorously tested platform that replicates CMS logic and maximizes efficiencies.

MedInsight Bundles Dashboards

Improve care coordination, quality, and costs

Improve outcomes and costs by managing episodes of care for specific bundled payment programs, analyze utilization trends over time, and gain greater insight into individual patient data.

Optimize efficiencies and outcomes

Scale and streamline operational workstreams with a single, proven platform that enables different stakeholders (i.e., financial, clinical, quality, or administrative) to quickly sift through data according to time frame, provider attendance/operation, beneficiary demographics, or other criteria.

Increase performance, satisfaction, and profitability

Define and measure bundled payments and meet quality and financial targets with increased insights into opportunities to enhance patient care and reduce spend.

Use cases: How Bundles can help

Claims-based reporting

Process claims feeds for all models and obtain detailed views of anchor hospitalizations, post-acute care, patient and provider profiling, target price and quality calculations, and utilization performance.

Benchmark comparisons

Identify the types of episodes of care that are most appropriate for a bundled payment arrangement with reliable benchmark data (i.e., baseline, peers, national).

Cost and value opportunity analyses

Prioritize opportunities to improve financial and clinical outcomes with a clear framework for defining and measuring success and by evaluating utilization shifts to benchmarks and estimated target prices.

Contract management and intelligence

Support network contract negotiations with enhanced ability to meet the demands, timeframes, and reporting for each bundled payment program and support program implementations.

Episode volume and characteristics

Monitor episode characteristics (e.g., volume and costs for historical and performance periods, site of services, codes triggering the episode) throughout the entire care process, from pre-admission to the community or home, and in relation to your costs versus targets.

Payment and settlement

Understand and audit reconciliation reports from CMS to determine whether payments are appropriate given program parameters and calculate downstream incentive payments for contributing providers.
