

Value-Based Care Insights

Uncover cost and quality opportunities with data visualization

At Milliman MedInsight®, we understand that Accountable Care Organizations (ACOs) are revolutionizing healthcare by shifting the payment process from quantity-based services to quality-based care outcomes. To achieve value-based care goals, ACOs require a scalable analytics approach to identify opportunities for improving care quality, controlling costs, and minimizing financial risk.

With VBC Insights, included in MedInsight's Value-Based Care Platform, users can effortlessly track utilization trends over time and dive into individual patient cohorts to uncover cost-saving opportunities. Powered by the expertise of Milliman, these customizable, prescriptive, and comprehensive reports are designed to support executive-level reporting and teams of all analytic ability levels. The advantages of using VBC Insights include:

Single source of truth

Deliver reliable data and insights to clinical and operational stakeholders to support informed decision-making.

Speed to insight

Monitor cost drivers, quality of care, and utilization and cost trends over time with intuitive dashboards and reporting views.

High-quality data & benchmarks

Compare performance confidently to tailored benchmarks that account for risk and demographic factors at the service category level.

Integrated population views

Define and stratify patient populations that could benefit from additional support and outreach by care coordinators.

Optimized performance

Extend your data analytics capability with a dynamic interface that pinpoints opportunities to close care gaps and minimize waste.

Increased transparency & trust

Leverage transparent criteria for cost and patient care performance to build provider trust and impact behaviors.

Insights dashboards

Identify and prioritize cost savings and quality improvement opportunities

Deliver high-quality, cost-effective care by gaining a deeper understanding of how to reduce unneeded emergency department (ED) visits, hospital admissions, readmissions, post-discharge care, medication use, and out-of-network utilization.

Optimize efficiencies and outcomes

Free up valuable resources and identify opportunities more efficiently and in less time with contextualized reports that can easily be filtered (e.g., time periods, demographic characteristics, provider groups or regions, or other criteria) and plug into existing workflows.

Increase performance, satisfaction, and profitability

Increase alignment and the likelihood of value-based care success by providing stakeholders with meaningful insights needed for prioritizing strategic initiatives and achieving shared goals.

Use cases: How VBC Insights can help

Chronic condition management

Gain holistic views of patients' health to proactively identify and stratify those who are at risk and those who are most likely to benefit from care management.

Post-acute (PAC) savings opportunities

Drill into PAC episodes by diagnosis-related group (DRG) and by facility (e.g., skilled nursing facility, home health). Leverage Milliman-developed benchmarks to understand cost drivers and potential savings.

Network leakage analysis

Encourage in-network referrals and care by understanding patient preferences, provider referral patterns, and cost and utilization of specific services.

Provider profiling

Optimize care and outcomes by assessing provider performance, identifying variations in care delivery, and uncovering opportunities for quality improvement and cost reduction.

Pharmacy trends

Track utilization, adherence and cost of prescriptions used to treat acute/chronic conditions and gain visibility into high/low utilizers and medication adherence.

Avoidable ED utilization

Monitor overall ED visits, including preventable and non-preventable ED utilization within value-based reimbursement programs.
