

ACO Builder

Gain comprehensive visibility and insight into ACO provider performance

Milliman ACO Builder® is the starting point for creating a successful Accountable Care Organization (ACO). Designed for healthcare organizations in the pre-contract stage, before agreements are finalized, provider networks are selected, or value-based care (VBC) arrangements are in place, it uses data-driven insights to evaluate both financial and clinical performance. By assessing the performance of potential and existing participants, both within and outside your network, ACO Builder helps you identify and evaluate prospective providers, compare results, and model scenarios to understand opportunities and risks. This enables informed decisions about network composition and structure, optimizing your position for success in Medicare risk programs.

By centralizing ACO provider management and supplying the analytical tools necessary to identify opportunities for growth and reduce exposure to risk, ACO Builder supports effective participation in all major Medicare risk programs, including:

Medicare Shared Savings Program (MSSP)

Direct Contracting (DC)

Accountable Care Organization Realizing Equity, Access, and Community Health (ACO REACH)

Medicare Advantage

Once your contract is in place, you can transition to VBC Contracts and VBC Insights tools for ongoing management and performance tracking, ensuring continuity from planning through execution.

Who should use ACO Builder

Healthcare organizations, physician groups, and payers preparing to enter into an ACO or other value-based agreements who want to ensure they are structured for maximum performance and shared savings.

Key benefits

Reduce risk and improve financial health

Gain a clear view of financial performance at the participant level to strengthen partnerships, assess current participants, and recruit new ones using accurate, up-to-date data.

Benefit from Milliman expertise

Enhance ACO performance through detailed analysis of assignment patterns, risk scores, regional efficiency, performance trends, financial settlements, and Qualified Advanced APM Participant (QP) incentives.

Forecast financial settlement

Model scenarios using different combinations of ACO participants and immediately see the estimated financial impact.

Evaluate economic impact

Analyze and compare the effects of program changes and contract renewals to projected benchmarks and expenditures, enabling strategies that improve ACO financial stability.

Key features

In-depth metrics

Access comprehensive performance data, including historical expenditures, risk scores, risk-adjusted trends, regional efficiency, and QP incentives. Review settlement results for different ACO configurations by risk track, risk corridor, and attribution methodology.

External comparisons for business growth

Incorporate physician performance into your planning process with the advantage of complete Medicare data for all participating physicians.

Traceable calculations

Export results from ACO Builder into your own financial dashboards and forecasts for transparent, verifiable reporting.

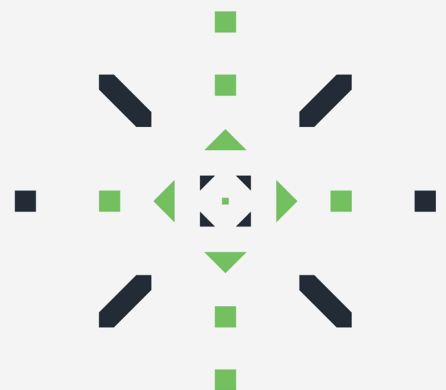

Flexible analysis options

Use the Power BI version of ACO Builder to run scenarios directly through your web browser without installing additional software. The Excel version allows for customized reporting and easy integration into your internal Excel tools and other solutions.

Industry-leading insights for VBC success

More than a dashboard, ACO Builder is a flexible, customizable, full pro-forma projection model that helps you optimize ACO performance. It delivers in-depth performance insights not available from standard Medicare ACO reports, revealing opportunities to improve care quality and operational efficiency. You also benefit from MedInsight's comprehensive VBC solutions, supporting your organization at every stage of your VBC journey with tailored insights and adaptable tools to meet your evolving needs.
